Technical Stack

AI, BACKEND & APIS
LLM chatbots, automated SMS/WhatsApp reminders & follow-ups, Node.js / Express, FastAPI, REST APIs, authentication & authorization, M-Pesa Daraja, Stripe, Africa's Talking

LANGUAGES & FRONTEND
TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3, React, Next.js, landing pages, mobile-first UI, accessibility

DATA LAYER
PostgreSQL, Supabase, Redis / BullMQ, SQL, migrations, row-level security

CLOUD & DEVOPS
AWS, Docker, GitHub Actions CI/CD, Vercel, Render, Linux / WSL, Sentry

QUALITY & DATA
Git, GitHub, automated testing, regression checks, pandas, NumPy, scikit-learn

Profile

Full-stack developer who **fixes the problems that cost local businesses money**: missed enquiries, no-shows and slow follow-up. I build simple systems that solve them, from **landing pages** and **AI chatbots** that capture and answer every lead, to booking, **M-Pesa & Stripe** payments and **automated SMS/WhatsApp reminders**, and run them reliably on AWS. Based in Nairobi, working with clients worldwide.

Experience

Full Stack Developer

Jan 2024 – Present

Self-Employed / Freelance · Nairobi, Kenya

Built and operate a booking and payments platform used by local businesses such as salons, clinics and tutors, replacing missed calls, manual follow-up and double-booked diaries with systems that run themselves.

Lost enquiries	No-shows	Payments	Double-bookings
pages + chatbot	auto reminders	M-Pesa & Stripe	prevented

- **Lost enquiries:** designed and built website landing pages that present each business clearly and turn visitors into enquiries and bookings, with fast, mobile-first layouts and clear calls to action.
- **Slow replies:** integrated **LLM-powered chatbots** into websites and web apps through model APIs, answering customer questions instantly and connecting to live application data.
- **No-shows:** built a Redis/BullMQ queue for SMS and WhatsApp reminders, reducing customer **no-shows**.
- **Double-bookings:** prevented them with PostgreSQL exclusion constraints and transactions, keeping production **free of booking conflicts**.
- **Payment friction:** integrated **M-Pesa Daraja (STK Push)** and **Stripe** with idempotent webhook handling, eliminating duplicate charges and cutting payment support tickets.
- **One platform, many businesses:** shipped a **multi-tenant web app** with Next.js, Node.js (Express) and PostgreSQL, with role-based access so each business sees only its own data.
- **Real-world speed:** built a mobile-first, low-bandwidth UI that **loads quickly on 3G**, and optimised slow queries with indexing and caching to improve **API response time**.
- **Reliability:** containerised with Docker, GitHub Actions CI/CD with automated tests for **much faster** deployments, and AWS hosting with Sentry error tracking for **high uptime**.

Education

2019 – 2022
Kenya

Bachelor of Science in Data Science and Analytics

Jomo Kenyatta University of Agriculture and Technology (JKUAT)

Relevant academic work: Python and SQL data analysis; regression and classification model evaluation.
